                                                                                                                                                                                                                                                                                                            Principling meningitis and pneumonia processing processing the present sequence is Streptococcus pneumoniae peptide releasing CC The present sequence is Streptococcus pneumoniae peptide releasing CC factor (prfC). PrfC polypeptides and polynucleotides are useful for CC diagnosing susceptibility to diseases by detecting mutations or CC diagnosing susceptibility to diseases by detecting mutations or CC diagnosing diseases caused by organisms comprising the presence or CC amount of prfC polypeptide in cell or tissue samples. This method is cuseful for diagnosing the stage of infection and the type of pathogen. CC prfC polypeptides and polynucleotides can be used to screen for CC compounds), which can be used in treatment to enhance or block prfC cativity. PrfC polypeptide is useful for screening for antibacterial cc infections. PrfC polypeptides, polynucleotides and managination (gene therapy) to protect against bacterial cc infections. PrfC polypeptides, polynucleotides and antagonists may be used as a wound treatment to prevent adhesion of bacteria to matrix CC pathogen and mammalian host. PrfC antibodies are also useful for inducing an immune response to immunise and prevent disease, and for isolating CC diagnosed, prevented or treated include: othis media, conjunctivitis, cc especially meningitis.

PT for treating schizophrenia

PS Disclosure; Fig 8B(3); 184pp; English.

CC Proteins W02657-W02720 represent a range of G-protein coupled receptor

CC (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine,

CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,

CC odorant, cytomegaloviral and other GPR proteins. The peptides

CC W03578-W03651 represent the N-terminal fragments of the above proteins.

The receptor proteins were used to design polypeptides, pref. based on

the transmembrane domains, for use in G-protein coupled receptor ligand

CC binding assays. The polypeptide fragments retain biological activity

CC such as binding a GPR ligand or modulating GPR ligand binding to a GPR

CC (see W02747-W02999 for examples of polypeptide fragments).

CC The polypeptide fragments can be used in compositions for treating

CC subjects suffering from a pathology related to a GPR abnormality e.g. a

                                                                                                                                                                                      DNA encoding mammalian cannabinoid receptor - used for producing receptor for screening drugs and ligands and in detection Disclosure; Fig 5; 25pp; English.

SKR6 cDNA encoding the rat cannabinoid receptor was isolated from a rat cerebral cortex cDNA library. An EcoRI-XbaI fragment was used to screen a human cosmid library. A positive clone was identified and sequenced. There is ca. 97 per cent homology between this amino acid sequence deduced from the sequence of the positive human clone and rat cannabinoid receptor (see R14195). Recombinantly produced receptor can be used to screen for new drugs suitable for treatment of cannabinoid-treatable conditions, e.g. glaucoma, bronchial asthma,

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: lar output not generated. Tue Jan 11 15:49:24 2000; MasPar time 1.77 Seconds 147.986 Million cell updates/sec

Description:
Perfect Score:
Sequence: Scoring table: PAM 150 Gap 15 1 TGARTINGQLLYFRANGVQVKG 22 >US-09-290-049-3 (1-22) from US09290049.pep

Title:

Searched: 122461 seqs, 11912985 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-issued 1:5A_COMB 2:5B_COMB 3:PCT9_COMB 4:backfiles1

Statistics: Mean 19.644; Variance 62.865; scale 0.312

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence represents an alpha-D-glucosyltransferase from Streptococcus salivarius. The enzyme is primer-independent, and produces soluble glucan from sucrose. A gene encoding the enzyme may be cloned and expressed in Escherichia coli using a subclone of phage lambda-Cl3, e.g. plasmid pGSG501 or plasmid pGSG502. The DNA may also be expressed in a transgenic plant, to improve the clovel of stored carbohydrate in a pasture plant which normally contains low levels, or to prevent degradation of stored carbohydrate during plant senescence. Dextran may be isolated from the plant, for use as a food binder or pharmaceutical additive. Primer independence ensures that the enzyme will be functional in plants. The glucan is poorly degraded in plants but easily degraded by bacteria in the rumen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The gB polypeptides can be used for the production of antibodies (both used in immunoassays) and in vaccines. Recombinant avipox virus expressing the ILV gB can be used for immunising fowl, especially

                                                           New matrix metallo:protease(s) and DNA encoding them - also vectors, recombinant cells and complexes with ligands, useful as proteolytic agents and for identification of specific inhibitors and activators claim 8: page 30; 85pp; German.

The present sequence is that of human matrix metalloprotease MMPmla. The protein has mol. wt. 65591 and comprises a signal peptide, pro-region, conserved catalytic domain and haemopexinhomologous sequence, all typical of known metalloproteases. MMPmla differs from known metalloproteases in having a hydrophobic region near the C-terminus, suggesting that the protein is membrane-bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Fig 1; 61pp; English.
Claim 1; Fig 1; 61pp; English.
The present sequence is human induced tumour protein (HITP), which can be used to treat and prevent cancer, specifically melanoma and carcinoma of the breast, colon or brain. HITP 1 cancer cell differentiation, and stops cell division.

                          MMP proteins can hydrolyse extracellular matrix proteins and are involved in certain pathologies. The new MMP will be useful for letecting MMP inhibitors or activators and to generate diagnostic

The present sequence is that of human matrix metalloprotease MMPmlb. The protein has mol. wt. 65900 and comprises a signal peptide, pro region, conserved catalytic domain and haemopexin-homologous sequence, all typical of known metalloproteases. MMPmlb differs from known metalloproteases in having a hydrophobic region near the C-terminus, suggesting that the protein is membrane-bound. MMP proteins can hydrolyse extracellular matrix proteins and are involved in certain pathologies. The new MMP will be useful for

When this expression library was screened using TIA-1 monoclonal antibody, several bacteriophage expressing immunoreactive fusion proteins were identified. Cross hybridisation analysis cluster three independent clones contg. related cDNAs. The largest cDNA insert was used to probe the original library for largest cDNA insert was used to probe the original library for antigen. The antigen is active in lymphocyte-mediated cytotoxicity and can eliminate a wide variety of virus infected or transformed target cells. TIAR or TIA-1 antigen may be linked chemically or recombinantly to cell targetting ligands such as growth factors, hormone or antibodies, and may be used to kill targetted cells, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-JUN-1995.

This sequence corresponds to a 15kD immunogenic protein associated with cytoplasmic granules in cytolytic T lymphocytes and natural killer cells. The protein is found principally in a subpopulation CD8+ T lymphocytes from peripheral blood mononuclear cells. It reacts with monoclonal antibody TIA-1 (HB 10319).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Anderson PJ, Streu WPI; 91-202096/28.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-SEP-1991 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 39; 61pp; English.

CS outhern blots of genomic DNA probed with a TIA-1 antigen specific probe were unexpectedly complex suggesting that either the TIA-1 cantigen gene was very large, or that TIA-1 antigen-related genes consider the derived from PHA-activated T cells was screened with a TIA-1 antigen CC CDNA probe. Several TIA-1- related CDNAs were identified in this manner. A comparison of these varient clones with TIA-1 genomic sequences indicated that all but one were likely to be splice varients of the CC TIA-1 gene. Like TIA-1 antigen, TIAR is a member of a family of CC RNA-binding proteins, possessing 3 RNA-binding domains and a carboxy terminal auxilary domain. A segment of the CDNA is useful as a probe correct of determining the presence of cytolytic lymphocytes in a biological confective agent, e.g. HIV virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RNA from cytolytic T cell clone T4T8Cl, which expresses high levels of TIA-1 antigen was used for theconstruction of a cDNA library in lambda gtll. When this expression library was screened using TIA-1 monoclonal antibody, several bacterlophage expressing immunoreactive fusion proteins were identified. Cross hybridisation analysis identified three independent clones conty. related cDNAs. The largest cDNA insert was used to probe the original library for isolation of full length cDNAs. When this same probe was used to screen a second lambda gtll library prepd. from PHA-activated T cells, a 2.2 kb insert cDNA was 150lated, clone 2G9.4, which encodes crp40-TIA-1, a 40 kD TIA-1 antigen. The antigen is active in lymphocyte-mediated cytotoxicity and can eliminate a wide variety of virus infected or transformed target cells. TIAR or TIA-1 antigen may be linked chemically or recombinantly to cell targetting ligands such as growth factors, hormone or antibodies, and may be used to kill targetted cells, e.g. cancer cells.

Proteins W5349-W54364 are examples of proteins produced in the endometrium during the hyperplasia, adenocarcinoma or proliferative phase of the endometrium. The presence and quantities of these proteins can be detected using 2D gel electrophoresis comparison of cell lysates. The proteins can be used as biochemical markers to detect the phase of the endometrium and can be measured in body fluids, obviating the need for endometrial biopsies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W54351;

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tue Jan 11 15:46:03 2000; MasPar time 1.64 Seconds 145.493 Million cell updates/sec

lar output not generated.

Description: Perfect Score: Sequence: >US-09-290-049-2 (1-20) from US09290049.pep 135 1 VPSYSFIRTAHDSEVQDLIA 20

Scoring table: PAM 150 Gap 15

Searched: 122461 seqs, 11912985 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-issued 1:5A_COMB 2:5B_COMB 3:PCT9_COMB 4:backfiles1

Statistics: Mean 19.113; Variance 59.268; scale 0.322

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Database:

pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 28.511; Variance 41.538; scale 0.686

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

EMBO J. (1994) 13:2625-2638
Eight genes and alternative RNA processing pathways generate
an unexpectedly large diversity of cytoplasmic intermediate
filament proteins in the nematode Caenorhabditis elegans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   *superfamily cpl repeat homology glycosyltransferase; hexosyltran

Title: >US-09-290-049-2
Description: (1-20) from US09290049.pep
Perfect Score: 135

Sequence: 1 VPSYSFIRTAHDSEVQDLIA 20

Scoring table: PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37
1:swissprot

Statistics: Mean 29.305; Variance 37.765; scale 0.776

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
